MY DEVELOPER PORTFOLIO

A more polished, modern website starter

DARK CINEMATIC · BLACK + NEON GREEN · RESPONSIVE

This revised guide includes a more designed portfolio: a split hero, code-window illustration, glowing accents, skill tiles, project cards, responsive layout, and a contact section. No personal name is included.

Files: index.html · style.css · script.js · README.md

1. Make the project folder

Create a folder named **my-portfolio** with these files:

```
my-portfolio/
  index.html
  style.css
  script.js
  README.md
```

2. index.html — website structure

Create **index.html** and paste the following code.

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <meta name="description" content="A student developer portfolio and project showcase.">

3. style.css — visual design

Create **style.css**. This controls the visual style, responsive layout, cards, and animations.

```
@import url('https://fonts.googleapis.com/css2?family=DM+Mono:wght@400;500&family=Manrope:wght@400;500;600;700;800&display=swap');

```

5. README.md

```
# My Developer Portfolio

A responsive, dark-green developer portfolio built with HTML, CSS, and JavaScript.

## Files
- `index.html` — page content
- `style.css` — layout, responsive styles, and visual design
- `script.js` — current year in the footer

## Preview locally
Keep all three files in the same folder, then open `index.html` in a browser.

## Before publishing
- Replace `your-email@example.com` with an email you are comfortable sharing publicly.
- Replace the sample GitHub links with the real project repository URLs.
- Update the skills list to match your current skills.
- Keep project descriptions accurate; add screenshots and tested code as projects develop.

## Publish with GitHub Pages
1. Create a repository, for example `my-portfolio`.
2. Upload `index.html`, `style.css`, `script.js`, and this README to the repository root.
3. Open **Settings → Pages**.
4. Select **Deploy from a branch**, choose `main` and `/(root)`, then save.
5. Wait for GitHub Pages to provide the live site URL.
```

6. Test, upload, and publish

Test it first

1. Save all three code files in the same folder.

2. Double-click **index.html** to open it in a browser.

3. Resize the browser to check the mobile layout. Internet access is needed for the optional Google Fonts import; the site still has fallback fonts.

Upload to GitHub

1. Create a repository called **my-portfolio**.

2. Upload **index.html**, **style.css**, **script.js**, and **README.md** to the repository root and commit the files.

Publish for free with GitHub Pages

1. Open the repository and go to **Settings** → **Pages**.

2. Choose **Deploy from a branch**, select branch **main** and folder **/(root)**, then save.

3. Wait for GitHub Pages to publish the website and display its URL.

Personalize before sharing

Replace the sample email and GitHub links with your own public links. Remove any skills you have not started learning yet. Keep project descriptions honest and add screenshots once the projects work.
